EDUCATION

Bachelor of Science in Computer Science: GPA 3.81

Grambling State University

May 2028

Grambling, LA

Relevant Coursework: Data Structure and Algorithms, Calculus I & II, Physics I & II, Foundations of AI

TECHNICAL SKILLS

Languages | Java, Python, JavaScript, TypeScript, SQL, HTML/CSS

Frameworks | React, FastAPI, Spring Boot, Flask, Django, Node.js

Data & Cloud | PostgreSQL, MySQL, Redis, Apache Kafka, Apache Spark, Supabase, AWS

Developer Tools | Git, Docker, Kubernetes, VS Code, IntelliJ, Cursor

Libraries | PyTorch, Pandas, NumPy, OpenCV, MediaPipe, Scikit-learn

TECHNICAL EXPERIENCE

Software Engineer Mentee

May 2026 - Present

Basta Code2Career, Project Basta

Remote

- Selected as 1 of 200 students from 1,500 applicants for a 10-week mentorship focused on data structures, algorithms, and technical interviews
- Collaborated weekly with a Google Software Engineer to solve coding challenges, strengthen algorithmic problem-solving, and understand system design

Google Career Launchpad Participant

Jan 2026 – May 2026

Google Cloud, Thurgood Marshall College Fund

Remote

- Completed a 9-week Google Cloud training program spanning six modules, instructor-led sessions, and hands-on labs
- Used Gemini Advanced, NotebookLM, and Google AI Studio to practice prompt design and automated workflows
- Studied LLM's, model platforms, AI agents, responsible AI, and output optimization for the GAIL exam

PROJECTS

Porter | *Java, Spring Boot, Apache Kafka, Apache Spark, MySQL, Docker*

- Engineered a distributed stock portfolio platform with Kafka price streams, MySQL persistence, and Dockerized infrastructure
- Designed a 13-endpoint Spring Boot REST API exposing transactions, positions, P&L, historical snapshots, and real-time valuation
- Automated weighted-average cost basis and P&L calculations with PySpark every 10 seconds; validated all endpoints through end-to-end testing

Sign Language Bridge | *Python, FastAPI, React, TypeScript, PyTorch, AWS Bedrock*

- Built a real-time ASL-to-speech application using MediaPipe, an ST-GCN classifier, and FastAPI WebSockets
- Integrated Amazon Nova Micro and Nova Sonic to translate output into Spanish/French and synthesize multilingual speech
- Reduced external API calls by 60-70% with Redis caching and persisted users, sessions, and translation history in PostgreSQL

CarePilot | *React, TypeScript, IndexedDB, Workbox, Supabase*

- Built an offline-first PWA for community health workers using service-worker caching, IndexedDB storage, and background sync
- Implemented WHO-aligned maternal and 7-domain IMCI assessment workflows with severity classification and referral guidance
- Added optional AI symptom interpretation through Supabase Edge Functions with automatic structured-input fallback when offline

CourseGrounded | *Python, FastAPI, React, TypeScript, Supabase, pgvector*

- Engineered a tenant-isolated RAG platform that ingests course PDFs, creates page-aware chunks, and indexed embeddings in Supabase PostgreSQL with pgvectors
- Built confidence-gated retrieval and citation validation to ground answers in uploaded materials
- Designed per-course workflows for generating cited study guides, flashcards, and practice exams via FastAPI and structured LLM outputs
